1 Introduction

1.1 Why choose AQA?

AQA is the UK's favourite exam board and more students receive their academic qualifications from AQA than from any other board. But why is AQA so popular?

AQA understands the different requirements of each subject by working in partnership with teachers. Our GCSEs:

- enable students to realise their full potential
- contain engaging content
- are manageable for schools and colleges
- are accessible to students of all levels of ability
- lead to accurate results, delivered on time
- are affordable and value for money.

AQA provides a comprehensive range of support services for teachers:

- access to subject departments
- training for teachers including practical teaching strategies and approaches that really work presented by senior examiners
- personalised support for Controlled Assessment
- 24 hour support through our website and online *Ask AQA*
- past question papers and mark schemes
- comprehensive printed and electronic resources for teachers and students

AQA is an educational charity focused on the needs of the learner. All our income goes towards operating and improving the quality of our specifications, examinations and support services. We don't aim to profit from education – we want you to.

If you are an existing customer then we thank you for your support. If you are thinking of moving to AQA then we look forward to welcoming you.

1.2 Why choose Design and Technology: Textiles Technology?

The specification has been developed to enable candidates to demonstrate their creativity, with making of textile products a vital feature of the candidate's experience of taking this specification.

The specification is clear, realistic and straightforward and designed for actual classroom practice, both in terms of assessment and the activities that candidates will undertake.

This specification builds on the previous specification, moving smoothly forward allowing teachers to develop their candidate work in line with creativity – new ideas and new materials.

The specification has been designed directly to enable candidates to move forward from Key Stage 3 Design and Technology and onto GCE Design and Technology: Product Design (Textiles), or the Manufacturing and Product Design Diploma.

The assessment criteria have changed to become more up to date with the current requirement of QCA and yet reflecting candidate performance and a simple assessment for all Design and Technology specifications.

Design and making are encouraged so as to prepare candidates for taking higher level courses or for entering the world of work.

The specification forms part of the Design and Technology suite and has been written to ensure comparability between the different specifications. This will help departments in terms of internal standardisation and teaching.

The AQA subject team may be contacted easily, to help centres with their delivery of this specification.

1.3 How do I start using this specification?

Already using the existing AQA Design and Technology: Textiles Technology specification?

- Register to receive further information, such as mark schemes, past question papers, details of teacher support meetings, etc, at **<http://www.aqa.org.uk/rn/askaqa.php>**
Information will be available electronically or in print, for your convenience.
- Tell us that you intend to enter candidates. Then we can make sure that you receive all the material you need for the examinations. This is particularly important where examination material is issued before the final entry deadline. You can let us know by completing the appropriate Intention to Enter and Estimated Entry forms. We will send copies to your Exams Officer and they are also available on our website (**http://www.aqa.org.uk/admin/p_entries.php**).

Not using the AQA specification currently?

- Almost all centres in England and Wales use AQA or have used AQA in the past and are approved AQA centres. A small minority is not. If your centre is new to AQA, please contact our centre approval team at **centreapproval@aqa.org.uk**

1.4 How can I find out more?

Ask AQA

You have 24-hour access to useful information and answers to the most commonly-asked questions at **<http://www.aqa.org.uk/rn/askaqa.php>**

If the answer to your question is not available, you can submit a query for our team. Our target response time is one day.

Teacher Support

Details of the full range of current Teacher Support meetings are available on our website at **<http://www.aqa.org.uk/support/teachers.php>**

There is also a link to our fast and convenient online booking system for Teacher Support meetings at **<http://events.aqa.org.uk/ebooking>**

If you need to contact the Teacher Support team, you can call us on 01483 477860 or email us at **teachersupport@aqa.org.uk**

2 Specification at a Glance

This specification is one of a suite of eight in Design and Technology offered by AQA. There is one tier of assessment covering grades A* to G.

3 Subject Content

Design and Technology is a practical subject area which requires the application of knowledge and understanding when developing ideas, planning, producing products and evaluating them. The distinction between Designing and Making is a convenient one to make, but in practice the two often merge. For example, research can involve not only investigating printed matter and people's opinions, but also investigating e.g. proportions, adhesives, colour, structures and materials through practical work.

The skills which follow underpin all learning and cover the programme of study for KS4 Design and Technology.

Designing Skills

Candidates should be taught to:

- be creative and innovative when designing;
- design products to meet the needs of clients and consumers;
- understand the design principles of form, function and fitness for purpose;
- understand the role that designers and product developers have, and the impact and responsibility they have on and to society;
- analyse and evaluate existing products, including those from professional designers;
- develop and use design briefs and specifications for product development;
- consider the conflicting demands that moral, cultural, economic, and social values and needs can make in the planning and in the designing of products;
- consider environmental and sustainability issues in designing products;
- consider health and safety in all its aspects;
- anticipate and design for product maintenance where appropriate;
- design for manufacturing in quantity and to be aware of current commercial/industrial processes;
- generate design proposals against stated design criteria, and to modify their proposals in the light of on-going analysis, evaluation and product development;
- reflect critically when evaluating and modifying their design ideas and proposals in order to improve the products throughout inception and manufacture;

- use, where appropriate, a range of graphic techniques and ICT (including digital media), including CAD, to generate, develop, model and communicate design proposals;
- investigate and select appropriate materials and components;
- plan and organise activities which involve the use of materials and components when developing or manufacturing;
- devise and apply test procedures;
- check the quality of their work at critical/key points during development, and to indicate ways of modifying and improving it when necessary;
- communicate the design proposal in an appropriate manner;
- be flexible and adaptable when designing;
- test and evaluate the final design proposal against the design specification;
- evaluate the work of other designers to inform their own practice;
- the advantages of working collaboratively as a member of a design team;
- understand the need to protect design ideas.

Making Skills

Candidates should be taught to:

- select and use tools/equipment and processes to produce quality products;
- consider the solution to technical problems in the design and manufacture process;
- use tools and equipment safely with regard to themselves and others;
- work accurately and efficiently in terms of time, materials and components;
- manufacture products applying quality control procedures;
- have knowledge of Computer Aided Manufacture (CAM) and to use as appropriate;
- ensure, through testing, modification and evaluation, that the quality of their products is suitable for intended users and devise modifications where necessary that would improve the outcome(s);
- the advantages of working as part of a team when designing and making products.

3.1 Unit 1: Written Paper

Materials and components

Candidates should develop a working knowledge of textiles materials and components appropriate to modelling, prototyping and manufacturing.

Candidates should be taught to:

Fibres and Fabrics

Properties and characteristics

- have a working knowledge of the basic composition, physical and aesthetic characteristics of a range of different fibres to include: natural fibres (cotton and wool), regenerated fibres (viscose), synthetic fibres (polyester and elastomeric);
- have a working knowledge of combination, construction and use of textiles fibres and fabrics;
- understand the need to combine fibres, to include polyester/cotton and combinations including elastomerics;
- investigate woven fabrics (plain weave, twill weave and satin weave), knitted fabrics and one non-woven fabric. Through disassembly investigate how they are constructed. Know that modern microfibres can be used to construct woven, knitted, laminated and micro-encapsulated 'Smart' fabrics;
- be aware of technological advances in textiles materials and their use in a wide range of industries;
- assess and evaluate the working properties of fibres and fabrics and how they can impact on fabric choices for products. Be aware of the use of manufacturers' fabric specifications to select fabrics, and how manufacturing techniques and processes can influence fabric choices.

Product maintenance, suitability and fitness for purpose

- know and design for the maintenance needs of textile products including typical/popular fabrics made from them and implement current textile labelling, including statutory legislation;
- understand the factors which constitute suitability/fitness for purpose, i.e. wearability, warmth, comfort, absorbency, durability, after care, safety, flammability, stain resistance, aesthetic qualities.

Finishing Processes

Dyeing and printing

- have a knowledge and understanding of one basic commercial method and one hand method of dyeing and printing fabric.

Decoration and enhancement

- select and know how to use a variety of appropriate surface decorative techniques in order to improve the aesthetic qualities of textiles, fabrics and products.

Finishes

- have a working knowledge of finishes (to include stain resistance, water resistance, flame retardancy, crease resistance) applied to fabrics in order to improve their performance; evaluate the effects of these fabric finishes paying attention to use, comfort, safety, maintenance, manufacturing costs and retail price;
- have knowledge of at least one modern 'Smart' finish to fabrics (to include thermochromatic printing);
- have knowledge of emerging technologies: nano materials and integrated electronics within textiles designs.

Components

Manufactured Components

- select, use and evaluate the function, suitability and safety of manufactured components in design and make tasks; identify and have a working knowledge of components including fastenings (to include zips, buttons and Velcro), threads, trimmings, interfacing, motifs, labels and electronic components; be aware of the technological advancements in component design.

Design and market influences

Candidates should be taught how to analyse textile products and processes. They should consider how design and technology affects the manufacturer, user and environment, and the importance of health and safety issues. They should be aware of new developments in technology and current social issues that may influence product design.

Candidates should be taught to:

Product analysis

Product Design

- understand the influence of trend forecasts when designing textiles products;
- analyse past and present textile designs and products in order to evaluate shape, style, aesthetics, choice of materials and components, construction techniques, decorative techniques, fitness for purpose, marketability; and use the findings of this research to generate new and original design ideas.

Evaluation Techniques

- check of design proposals against design criteria;
- use disassembly to make critical judgements about the design, manufacture and performance of existing products;
- list design criteria that influence textile product design and use this to test and evaluate the final design proposal;
- understand the purpose and value of a design specification to guide design thinking;
- quality assurance through testing and evaluation of quality and fitness for purpose;
- use ongoing evaluation to make judgements and to suggest improvements during design development and making activities;
- consider other peoples' views when selecting and refining product designs, to include user trials.

Evaluation of quality of own product compared with market alternatives

- compare design proposal to a similar commercial product in order to review and modify design;
- evaluate the appeal, quality and fitness for purpose of the design proposal against consumer expectations.

Social, Cultural, Moral, Health and Safety and Environment Issues

Social and cultural influences on the consumer market

- understand the role of the designer and consider the impact of design proposals on society;
- identify developments in technologies, social and cultural ideas, fashion trends and economic factors that influence consumer choice and product design.

Consumer choice and ethical issues

- understand the influence of ethical trading and the consumers' role in social and environmentally sustainable design.

Moral and environmental issues

- understand the moral and environmental issues associated with textiles production;
- understand what is meant by the recycling of textiles, waste reduction, organic and Fair Trade cotton, bio fibres, biodegradable fibres/fabrics.

Environmental effects: the disposal of chemicals used to manufacture products; the need to dispose of waste in a safe and environmentally friendly way

Health and Safety issues

- understand that the health and safety of both consumers and the work force is important.

As designers and consumers:

- select the appropriate materials and components;
- consider safety in terms of function;
- be aware of consumer rights and safety warnings on textile products.

As manufacturers:

- be aware of and understand Risk Assessments in relation to:
 - the correct and safe use of tools and equipment;
 - the correct and safe usage of materials, chemicals, solvents, flammable and toxic substances used in textile manufacture;
 - the need for correct protective clothing and safe working practices.

Processes and manufacture

Candidates should be aware of, and use appropriate, manufacturing processes and techniques including CAD and CAM. They should be aware of industrial and commercial practice and know about the processes involved in the commercial manufacture of textile products.

Candidates should be taught to:

Techniques And Processes

- select and use appropriate textile tools and equipment;
- know and understand how to use appropriate tools, machinery and equipment, including an overlocker, accurately and safely to produce own quality products.

Range of processes used for textile production and manufacture

- understand the various industrial systems used to produce textile products, including mass, batch and one-off production and procedures including Just In Time, line and sub-assembly;
- select and use the most appropriate technique(s), process(es) and equipment for manufacture.

Production Planning

Planning the development and manufacture of a product

Candidates must know how to: produce plans to ensure efficient production and successful completion, to include —

- a flow chart to show logical and efficient sequences of work;
- a detailed working drawing;
- a manufacturing specification;
- costs of production, including the constraints of budget and time scale.

Quality Assurance

- produce prototypes of own design(s) and test against the design and manufacturing specification and modify the product, where appropriate, to ensure that it meets the specifications;
- incorporate modifications as necessary during manufacture to ensure quality products.

Information and Communication Technology

Computer Technology and Communication

- use ICT as appropriate to research, collect, sort and present information;
- use graphic techniques, as appropriate, including CAD and CAM to design, develop, modify, enhance, model and communicate ideas.

Use of CAD and CAM

- know and understand the importance and benefits of using CAD/CAM in textile production in a global industry;
- know and understand that CAD/CAM can be used to aid planning, to enhance accuracy and efficiency of production and assure aesthetic quality;
- know and understand that CAD/CAM can be important in the reduction of manufacturing costs.

3.2 Unit 2: Design and Making Practice

Controlled assessment criteria

The assessment criteria which follow do not reflect a linear designing and making process. The project undertaken by the student should be viewed holistically and credit awarded wherever in the project it can be identified that a particular criterion has been met. As in any holistic assessment, a weak performance in one aspect of a student's work may be balanced by a strong performance in another. The principle of 'best fit' should be applied when using these criteria. For example, it is not necessary for a student's work to meet all of the bullet points in a particular mark band in order for a mark in that band to be awarded.

It should be noted that some marks attributable to the finished outcome can be obtained from criterion other than "Making", for example they may be evidenced in the folder or seen as part of the development process.

Candidates should undertake a single design and make activity which is selected from a range of board-set tasks. The tasks will be reviewed every two years. Candidates should submit a 3-dimensional outcome and a concise design folder and/or appropriate ICT evidence. The design folder should consist of approximately 20 pages of A3 paper or equivalent A4 paper or ICT equivalent. It is expected that candidates should spend approximately 45 hours on this activity.

All candidates should provide photographic evidence of the finished outcome and it is strongly recommended that photographic evidence at various stages of making is submitted.

Level of control

Within the controlled assessment component, levels of control are defined for the following three stages of assessment:

- task setting
- task taking
- task marking

Task setting

Students are required to submit a single design and make project which should be selected from a list of tasks provided by AQA at the start of the academic year. These tasks are broadly comparable and students can only submit a project which has been selected from this list. In certain situations it may be appropriate for centres to contextualise a given task in order to best suit their centre specific circumstances. In such a situation the centre should contact the controlled assessment adviser allocated to their centre in order to seek guidance. The list of board set tasks will be reviewed every two years and amended/added to as appropriate.

Task taking

Authenticity control – research and preparation may be completed under limited supervision. However, all work, with the exception of research and preparation, should be completed by students under informal supervision. This means that the centre must ensure that plagiarism does not take place, that sources used by students are clearly recorded and that each students' preparation for the final production of the work is his/her own.

Feedback control – teachers may review students' work and may provide advice at a general level. Teachers, however, must not provide detailed and specific advice on how the draft may be improved to meet the assessment criteria. The nature of any guidance provided and the details of any feedback given must be clearly recorded. Students may be guided as to the approach they might adopt but the outcome must remain their own. Likewise, feedback may evaluate progress to date and propose suggested broad approaches for improvement but the detailed correction or annotation of work for feedback purposes is not allowed.

Time control – each student should produce a design folder (paper or electronic) and a completed outcome. It is expected that the total activity should take approximately 45 hours to complete, including preparation but not including additional time for the teaching and learning of the subject content. We are keen to encourage succinctness and a focussed approach to this task and for this reason it is expected that the design folder should consist of approximately 20 pages of A3 paper (or the A4 or electronic equivalent). Examinations Officers should contact AQA Candidate Services for advice on any students who may need special consideration and, therefore, may require additional time.

Collaboration control – the work of individual students may be informed by working with others, for example when undertaking research, but students must provide an individual response in the task outcome.

Resources – students' access to resources is likely to be determined by the availability in centres. Examinations Officers should contact AQA Candidate Services for advice on any students who may require the use of any special equipment.

Task marking

Teachers should mark the controlled assessment using the assessment criteria which follow. Further details regarding this process are given in section 6. Moderation of the controlled assessment work is by inspection of a sample of students' work sent by post or electronically through the e-Portfolio system from the centre to a moderator appointed by AQA. Further details are provided in section 7.

Summary of Controlled Assessment Criteria

The following is a summary of the assessment criteria for the Controlled Assessment together with an indication of how these marks relate to the assessment objectives.

Assessment Criteria	Maximum Mark allocation	AO1	AO2	AO3
1 Investigating the design opportunity	8	5		3
2 Development of design proposals (including modelling)	32	2	30	
3 Making	32	2	30	
4 Testing and Evaluation	12			12
5 Communication	6	6		
Total	90	15	60	15

3

Criterion 1 Mark Band	Investigating the Design Context
7–8	<ul style="list-style-type: none"> • Discrimination shown when selecting and acquiring relevant research that will promote originality in designing • Excellent understanding and analysis of the design context • Detailed analysis of relevant existing products or systems undertaken related to design intentions • Comprehensive analysis of relevant and focussed research undertaken • Clear and specific design criteria identified, reflecting the analysis undertaken • Target market identified and the intended consumer/user profiled
5–6	<ul style="list-style-type: none"> • Good understanding and analysis of the design context • Good analysis of relevant products or systems undertaken • Good analysis of relevant research and context • Design criteria which reflects the analysis undertaken • Target market for product has been identified
3–4	<ul style="list-style-type: none"> • Basic understanding and analysis of the design context • Some analysis of related products or systems undertaken • Made a superficial analysis of most of the research material and the context • Design criteria reflects most of the analysis undertaken • Some consideration has been taken of the likely consumer/user
0–2	<ul style="list-style-type: none"> • Limited understanding or analysis of design context • Minimal analysis of other products or systems undertaken • Provided little evidence of research and analysis of context • Design criteria is very general and is lacking in any detail • Limited understanding of the target market/user evident

Criterion 2 Mark Band	Development of Design Proposals (including modelling)
26–32	<ul style="list-style-type: none"> • Imaginative and innovative ideas have been developed, demonstrating creativity, flair and originality. Further developments made to take account of ongoing research • A coherent and appropriate design strategy, with clear evidence of a planned approach, adopted throughout • The implications of a wide range of issues including social, moral, environmental and sustainability, are taken into consideration and inform the development of the design proposals • Excellent development work through experimentation with a wide variety of techniques and modelling (including CAD where appropriate) in order to produce a final design solution • Appropriate materials/ingredients and components selected with full regard to their working properties • Fully detailed and justified product/manufacturing specification taking full account of the analysis undertaken
19–25	<ul style="list-style-type: none"> • Imaginative ideas demonstrating a degree of creativity, which are further developed to take account of ongoing research • An appropriate design strategy, with evidence of planning, adopted for most aspects • Development of design proposals take into account the main aspects relating to a variety of social, moral, environmental and sustainability issues • Good development work achieved through working with a variety of techniques and modelling (including CAD where appropriate) • Appropriate materials/ingredients and components selected with regard to their working properties • Product/manufacturing specification is complete and reflects key aspects of the analysis undertaken
12–18	<ul style="list-style-type: none"> • Design ideas show some degree of creativity and further development • An appropriate design strategy, with some evidence of planning, adopted for some aspects • Developments of design solutions are influenced to some extent by factors relating to social, moral, environmental and sustainability issues • Adequate development work achieved through working with a range of techniques and modelling (including CAD where appropriate) • Materials/ingredients and components selected with some regard to their working properties • Product/manufacturing specification reflects most aspects of the analysis
6–11	<ul style="list-style-type: none"> • Ideas show some variation in approach or concept • A limited design strategy, with some evidence of planning, is evident • Some consideration taken of social, moral, environmental and sustainability issue in development of design solutions • Development work is lacking in detail but makes reference to a number of techniques and modelling (including CAD where appropriate) • Materials/ingredients and components selected with limited regard to their working properties • Limited product/manufacturing specification which reflects most obvious features of analysis
0–5	<ul style="list-style-type: none"> • Ideas are lacking in imagination with minimal development or further research • Little evidence of a logical approach being adopted, with no indication of planning • Development work shows little consideration of social, moral, environmental and sustainability issues • Basic development work undertaken using a limited range of techniques • Materials/ingredients and components selected with little regard to their working properties • Produced a simple product/manufacturing specification which is general in nature

Criterion 3 Mark Band	Making
26–32	<ul style="list-style-type: none"> • Final outcome(s) shows a high level of making/modelling/finishing skills and accuracy • Selected and used appropriate tools, materials and/or technologies including, where appropriate, CAM correctly, skilfully and safely • Worked independently to produce a rigorous and demanding outcome • Quality controls are evident throughout the project and it is clear how accuracy has been achieved. • The outcome has the potential to be commercially viable and is suitable for the target market
19–25	<ul style="list-style-type: none"> • Final outcome shows very good level of making/modelling/finishing skills • Selected and used appropriate tools, materials and/or technologies including, where appropriate, CAM correctly and safely • Outcome demonstrates a high level of demand • Quality control checks applied in the manufacture of the product • The outcome is suitable for the target market and could be commercially viable with further development
12–18	<ul style="list-style-type: none"> • Final outcome shows good level of making/modelling/finishing skills • Used appropriate materials, components, equipment and processes correctly and safely (including CAM) • Parts of outcome show high levels of demand • Applied quality control checks broadly but superficially • The outcome requires further development in order to be suitable for the target market
6–11	<ul style="list-style-type: none"> • Final outcome is largely complete and represents a basic level of making/modelling/finishing skills • Used materials, components and equipment correctly and safely (including CAM if appropriate) • Some aspects of outcome are demanding • Some evidence of limited quality control applied throughout the process • The outcome has some weaknesses which limit its suitability for the target market
0–5	<ul style="list-style-type: none"> • Final outcome is incomplete or represents an undemanding level of making/modelling/finishing skills • Used materials, components and equipment safely under close supervision • Worked with some assistance to produce outcome of limited demand • There is limited evidence of any quality control and levels of accuracy are minimal • The outcome has significant weaknesses which limit its suitability for the target market

Criterion 4 Mark Band	Testing and Evaluation
9–12	<ul style="list-style-type: none"> Detailed testing and evaluation as appropriate throughout the designing and making process taking account of client/user or third party opinion All aspects of the final outcome have been tested against the design criteria and/or the product/manufacturing specification Evaluate and justify the need for modifications to the product and consideration given as to how the outcome might need to be modified for commercial production
6–8	<ul style="list-style-type: none"> Appropriate testing and evaluation of product evident throughout the designing and making process Most aspects of the final outcome have been tested against the design criteria and/or the product/manufacturing specification Evaluate and justify the needs for improvements or modifications to the product
3–5	<ul style="list-style-type: none"> Evidence of some testing and evaluation leading to the production of the final outcome Some evidence of testing against the design criteria and/or the product/manufacturing specification Some improvements or modifications to product suggested
0–2	<ul style="list-style-type: none"> Minimal testing and evaluation throughout the designing and making process Limited or no testing of final outcome against the design criteria and/or the product/manufacturing specification Limited mention of some improvements or modifications that could be made to the product

Criterion 5 Mark Band	Communication
5–6	<ul style="list-style-type: none"> Design folder is focussed, concise and relevant and demonstrates an appropriate selection of material for inclusion All decisions communicated in a clear and coherent manner with appropriate use of technical language The text is legible, easily understood and shows a good grasp of grammar, punctuation and spelling
3–4	<ul style="list-style-type: none"> Design folder shows some skill in choice of material for inclusion but includes some irrelevant content Most decisions communicated with some clarity and with some use of technical language There are a small number of errors in grammar, punctuation and spelling
0–2	<ul style="list-style-type: none"> Design folder shows excessive duplication of information and a lack of brevity and focus resulting in irrelevant content Ideas and decisions communicated at a simplistic level with a limited grasp of the concepts involved and a limited use of technical vocabulary Numerous errors in grammar, punctuation and spelling

4 Scheme of Assessment

4.1 Aims and learning outcomes

This specification in Design and Technology: Textiles Technology encourages candidates to be inspired, moved and changed by following a broad, coherent, satisfying and worthwhile course of study and gain an insight into related sectors, such as manufacturing and engineering. They should prepare learners to make informed decisions about further learning opportunities and career choices.

GCSE specifications in Design and Technology enable candidates to:

- actively engage in the processes of design and technology to develop as effective and independent learners.
- make decisions, consider sustainability and combine skills with knowledge and understanding in order to design and make quality products
- explore ways in which aesthetic, technical, economic, environmental, ethical and social dimensions interact to shape designing and making
- analyse existing products and produce practical solutions to needs, wants and opportunities, recognising their impact on quality of life
- develop decision-making skills through individual and collaborative working
- understand that designing and making reflect and influence cultures and societies, and that products have an impact on lifestyle
- develop skills of creativity and critical analysis through making links between the principles of good design, existing solutions and technological knowledge.

4.2 Assessment Objectives (AOs)

The assessment units will assess the following assessment objectives in the context of the content and skills set out in Section 3 (Subject Content).

- AO1 Recall, select and communicate knowledge and understanding in design and technology including its wider effects.
- AO2 Apply knowledge, understanding and skills in a variety of contexts and in designing and making products.
- AO3 Analyse and evaluate products, including their design and production.

Quality of Written Communication (QWC)

GCSE specifications which require candidates to produce written material in English must:

- ensure that text is legible and that spelling, punctuation and grammar are accurate so that meaning is clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

In this specification QWC will be assessed in the Controlled Assessment and in the written paper. The Controlled Assessment criteria give further information on marks to be awarded in respect of QWC.

Weighting of Assessment Objectives for GCSE Design and Technology: Textiles Technology

The table below shows the approximate weighting of each of the Assessment Objectives in the GCSE components.

Assessment Objectives	Unit Weightings (%)		Overall Weighting of AOs (%)
	Unit 1	Unit 2	
AO1	15	10	25
AO2	15	40	55
AO3	10	10	20
Overall weighting of Units (%)	40	60	100

4.3 National criteria

This specification complies with the following.

- The Subject Criteria for GCSE Design and Technology including the rules for Controlled Assessment
- Code of Practice
- The GCSE Qualification Criteria
- The Arrangements for the Statutory Regulation of External Qualifications in England, Wales and Northern Ireland: Common Criteria
- The requirements for qualifications to provide access to Levels 1 and 2 of the National Qualification Framework.

4.4 Prior learning

There are no prior learning requirements. However, it is useful for candidates to have studied the National Curriculum for Design and Technology at Key Stage 3.

Any requirements set for entry to a course following this specification are at the discretion of centres.

4.5 Access to assessment: diversity and inclusion

GCSEs often require assessment of a broader range of competences. This is because they are general qualifications and, as such, prepare candidates for a wide range of occupations and higher level courses.

The revised GCSE qualification and subject criteria were reviewed to identify whether any of the competences required by the subject presented a potential barrier to any candidates regardless of their ethnic origin, religion, gender, age, disability or sexual orientation. If this was the case, the situation was

reviewed again to ensure such competences were included only where essential to the subject. The findings of this process were discussed with groups who represented the interests of a diverse range of candidates.

Reasonable adjustments are made for disabled candidates in order to enable them to access the assessments. For this reason, no candidates will have a barrier to any part of the assessment. Further details are given in Section 5.4.

5 Administration

5.1 Availability of assessment units and certification

Examinations and certification for this specification are available as follows:

	Availability of Units		Availability of Certification
	Unit 1	Unit 2	GCSE Award
June 2010	✓		
June 2011 onwards	✓	✓	✓

5.2 Entries

Please refer to the current version of *Entry Procedures and Codes* for up to date entry procedures. You should use the following entry codes for this qualification.

Unit 1 – 45701

Unit 2 – 45702

GCSE certification – 4572

QCA's 40% terminal rule means that 40% of the assessment must be taken in the examination series in which the qualification is awarded. This rule is not dependent on the size of the qualification. Therefore, all GCSE candidates, whether taking short course, single and double awards, must have 40% of their assessment taken at the end.

5.3 Private candidates

This specification is not available to private candidates.

5.4 Access arrangements and special consideration

We have taken note of equality and discrimination legislation and the interests of minority groups in developing and administering this specification.

We follow the guidelines in the Joint Council for Qualifications (JCQ) document: *Access Arrangements, Reasonable Adjustments and Special Consideration: General and Vocational Qualifications*. This is published on the JCQ website (<http://www.jcq.org.uk>) or you can follow the link from our website (<http://www.aqa.org.uk>).

Access arrangements

We can make arrangements so that candidates with special needs can access the assessment. These arrangements must be made **before** the examination. For example, we can produce a Braille paper for a candidate with a visual impairment.

Special consideration

We can give special consideration to candidates who have had a temporary illness, injury or indisposition at the time of the examination. Where we do this, it is given **after** the examination.

Applications for access arrangements and special consideration should be submitted to AQA by the Examinations Officer at the centre.

5.5 Language of examinations

We will provide units for this specification in English only

5.6 Qualification titles

The qualifications based on this specification is:

- AQA GCSE in Design and Technology: Textiles Technology.

5.7 Awarding grades and reporting results

The GCSE qualification will be graded on an eight-grade scale: A*, A, B, C, D, E, F and G. Candidates who fail to reach the minimum standard for grade G will be recorded as U (unclassified) and will not receive a qualification certificate.

We will publish the minimum raw mark for each grade, for each unit, when we issue candidates' results. We will report a candidate's unit results to centres in terms of uniform marks and qualification results in terms of uniform marks and grades.

For each unit, the uniform mark corresponds to a grade as follows.

Unit 1: Written Paper

(maximum uniform mark = 160)

Grade	Uniform Mark Range
A*	144–160
A	128–143
B	112–127
C	96–111
D	80–95
E	64–79
F	48–63
G	32–47
U	0–31

Unit 2: Design and Making Practice

Controlled Assessment

(maximum uniform mark = 240)

Grade	Uniform Mark Range
A*	216–240
A	192–215
B	168–191
C	144–167
D	120–143
E	96–119
F	72–95
G	48–71
U	0–47

We calculate a candidate's total uniform mark by adding together the uniform marks for the units. We convert this total uniform mark to a grade as follows.

GCSE Design & Technology
(maximum uniform mark = 400)

Grade	Uniform Mark Range
A*	360–400
A	320–359
B	280–319
C	240–279
D	200–239
E	160–199
F	120–159
G	80–119
U	0–79

5.8 Re-sits and shelf-life of unit results

Unit results remain available to count towards certification within the shelf life of the specification whether or not they have already been used.

Candidates may re-sit a unit once only. The better result for each unit will count towards the final qualification provided that the 40% rule is satisfied. Candidates may re-sit the qualification an unlimited number of times.

Candidates will be graded on the basis of the work submitted for assessment.

Candidates must take units comprising at least 40% of the total assessment in the series in which they enter for certification.

6 Controlled Assessment Administration

The Head of Centre is responsible to AQA for ensuring that controlled assessment work is conducted in accordance with AQA's instructions and JCQ instructions.

6.1 Authentication of controlled assessment work

In order to meet the requirements of Code of Practice AQA requires:

- **candidates** to sign the Candidate Record Form to confirm that the work submitted is their own
- **teachers/assessors** to confirm on the Candidate Record Form that the work assessed is solely that of the candidate concerned and was conducted under the conditions laid down by the specification
- **centres** to record marks of zero if candidates cannot confirm the authenticity of work submitted for assessment.

The completed Candidate Record Form for each candidate should be attached to his/her work. All teachers who have assessed the work of any candidate entered for each component must sign the declaration of authentication.

If teachers/assessors have reservations about signing the authentication statements, the following points of guidance should be followed.

- If it is believed that a candidate has received additional assistance and this is acceptable within the guidelines for the relevant specification, the teacher/assessor should award a mark which represents the candidate's unaided achievement. The authentication statement should be signed and information given on the relevant form.
- If the teacher/assessor is unable to sign the authentication statement for a particular candidate, then the candidate's work cannot be accepted for assessment.

If, during the external moderation process, there is no evidence that the work has been properly authenticated, AQA will set the associated mark(s) to zero.

6.2 Malpractice

Teachers should inform candidates of the AQA Regulations concerning malpractice.

Candidates must **not**:

- submit work which is not their own
- lend work to other candidates
- allow other candidates access to, or the use of, their own independently-sourced source material (this does not mean that candidates may not lend their books to another candidate, but candidates should be prevented from plagiarising other candidates' research)
- include work copied directly from books, the internet or other sources without acknowledgement and attribution
- submit work typed or word-processed by a third person without acknowledgement.

These actions constitute malpractice, for which a penalty (eg disqualification from the examination) will be applied.

If malpractice is suspected, the Examinations Officer should be consulted about the procedure to be followed.

Where suspected malpractice in controlled assessment is identified by a centre after the candidate has signed the declaration of authentication, the Head of Centre must submit full details of the case to AQA at the earliest opportunity. The form JCQ/M1 should be used. Copies of the form can be found on the JCQ website (<http://www.jcq.org.uk/>).

Malpractice in controlled assessment discovered prior to the candidate signing the declaration of authentication need not be reported to AQA, but should be dealt with in accordance with the centre's internal procedures. AQA would expect centres to treat such cases very seriously. Details of any work which is not the candidate's own must be recorded on the Candidate Record Form or other appropriate place.

6.3 Teacher standardisation

AQA will hold annual standardising meetings for teachers, usually in the autumn term, for controlled assessment. At these meetings we will provide support in contextualising the tasks and using the marking criteria.

If your centre is new to this specification, you must send a representative to one of the meetings. If you have told us you are a new centre, either by submitting an intention to enter and/or an estimate of entry or by contacting the subject team, we will contact you to invite you to a meeting.

AQA will also contact centres if

- the moderation of controlled assessment work from the previous year has identified a serious misinterpretation of the controlled assessment requirements, or
- a significant adjustment has been made to a centre's marks.

In these cases, centres will be expected to send a representative to one of the meetings. For all other centres, attendance is optional. If a centre is unable to attend and would like a copy of the written materials used at the meeting, they should contact the subject administration team at

dandt@aqa.org.uk

6.4 Internal standardisation of marking

Centres must standardise marking to make sure that all candidates at the centre have been marked to the same standard. One person must be responsible for internal standardisation. This person should sign the Centre Declaration Sheet to confirm that internal standardisation has taken place.

Internal standardisation may involve:

- all teachers marking some trial pieces of work and identifying differences in marking standards
- discussing any differences in marking at a training meeting for all teachers involved in the assessment
- referring to reference and archive material such as previous work or examples from AQA's teacher standardising meetings.

6.5 Annotation of controlled assessment work

The Code of Practice states that the awarding body must require internal assessors to show clearly how the marks have been awarded in relation to the marking criteria defined in the specification and that the awarding body must provide guidance on how this is to be done.

The annotation will help the moderator to see as precisely as possible where the teacher considers that the candidates have met the criteria in the specification.

Work could be annotated by either of the following methods:

- key pieces of evidence flagged throughout the work by annotation either in the margin or in the text;
- summative comments on the work, referencing precise sections in the work.

6.6 Submitting marks and sample work for moderation

The total mark for each candidate must be submitted to AQA and the moderator on the mark forms provided, by Electronic Data Interchange (EDI) or through the e-Portfolio system (only available for certain units/components) by the specified date (see

<http://www.aqa.org.uk/deadlines.php>.

Centres will normally be notified which candidates' work is required in the sample to be submitted to the moderator (please refer to section 7.1 for further guidance on submitting samples).

6.7 Factors affecting individual candidates

Teachers should be able to accommodate the occasional absence of candidates by ensuring that the opportunity is given for them to make up missed controlled assessments.

If work is lost, AQA should be notified immediately of the date of the loss, how it occurred, and who was responsible for the loss. Centres should use the JCQ form JCQ/LCW to inform AQA Centre and Candidate Support Services of the circumstances.

Where special help which goes beyond normal learning support is given, AQA must be informed through comments on the Candidate Record Form so that such help can be taken into account when moderation takes place.

Candidates who move from one centre to another during the course sometimes present a problem for a scheme of controlled assessment work. Possible courses of action depend on the stage at which the move takes place. If the move occurs early in the course the new centre should take responsibility for controlled assessment work. If it occurs late in the course it may be possible to arrange for the moderator to assess the work through the 'Educated Elsewhere' procedure. Centres should contact AQA at the earliest possible stage for advice about appropriate arrangements in individual cases.

6.8 Retaining evidence

The centre must retain the work of all candidates, with Candidate Record Forms attached, under secure conditions, from the time it is assessed, to allow for the possibility of an enquiry about results. The work may be returned to candidates after the deadline for enquiries about results. If an enquiry about a result has been made, the work must remain under secure conditions in case it is required by AQA.

7 Moderation

7.1 Moderation procedures

Moderation of the controlled assessment work is by inspection of a sample of candidates' work, sent by post or electronically through the e-Portfolio system from the centre to a moderator appointed by AQA. The centre marks must be submitted to AQA and to the moderator by the specified deadline (see <http://www.aqa.org.uk/deadlines.php>).

Centres entering fewer candidates than the minimum sample size and centres submitting through the e-Portfolio system should submit the work of all of their candidates. Centres entering larger numbers of candidates will be notified of the candidates whose work will be required in the sample to be submitted for moderation.

Candidates are encouraged to provide photographic evidence of the finished outcome as well as photographs at various stages of making. This will facilitate the moderation process. However, in some instances it may be necessary for the moderator to visit a centre to inspect a sample of the practical outcomes. Should this be necessary the moderator will contact the centre and make the necessary arrangements. Centres should ensure that the

practical work of candidates is available for inspection throughout the moderation period. AQA reserves the right to inspect the practical outcomes of candidates where it is felt appropriate.

Following the re-marking of the sample work, the moderator's marks are compared with the centre marks to determine whether any adjustment is needed in order to bring the centre's assessments into line with standards generally. In some cases it may be necessary for the moderator to re-mark the work of other candidates in the centre. In order to meet the possible request, centres must retain under secure conditions and have available the work and the Candidate Record Forms of every candidate entered for the examination and be prepared to provide them on demand. Mark adjustments will normally preserve the centre's rank order, but where major discrepancies are found, we reserve the right to alter the rank order.

Moderation will normally take place in June. Moderators will make contact to set a mutually convenient date for the visit.

7.2 Consortium arrangements

If there is a consortium of centres with joint teaching arrangements (i.e. where candidates from different centres have been taught together but where they are entered through the centre at which they are on roll), the centres must inform AQA by completing the JCQ/CCA form.

The centres concerned must nominate a consortium co-ordinator who undertakes to liaise with AQA on behalf of all centres in the consortium. If there are different co-ordinators for different specifications, a copy of the JCQ/CCA form must be submitted for each specification.

AQA will allocate the same moderator to each centre in the consortium and the candidates will be treated as a single group for the purpose of moderation.

7.3 Post-moderation procedures

On publication of the results, we will provide centres with details of the final marks for the controlled assessment work.

The candidates' work will be returned to the centre after the examination. The centre will receive a report

giving feedback on the accuracy of the assessments made, and the reasons for any adjustments to the marks.

We may retain some candidates' work for archive or standardising purposes

Appendices

A Grade Descriptions

Grade descriptions are provided to give a general indication of the standards of achievement likely to have been shown by candidates awarded particular grades. The descriptions should be interpreted in relation to the content outlined in the specification; they are not designed to define that content.

The grade awarded will depend in practice upon the extent to which the candidate has met the assessment objectives (see Section 4) overall. Shortcomings in some aspects of the candidates' performance may be balanced by better performances in others.

Grade	Description
A	<p>Candidates recall, select and communicate detailed knowledge and thorough understanding of design and technology, including its wider effects.</p> <p>They apply relevant knowledge, understanding and skills in a range of situations to plan and carry out investigations and tasks effectively. They test their solutions and work safely with a high degree of precision.</p> <p>They analyse and evaluate the evidence available, reviewing and adapting their methods when necessary. They present information clearly and accurately, making reasoned judgements and presenting substantiated conclusions.</p>
C	<p>Candidates recall, select and communicate sound knowledge and understanding of design and technology, including its wider effects.</p> <p>They apply knowledge, understanding and skills in a range of situations to plan and carry out investigations and tasks. They test their solutions and work safely with precision.</p> <p>They review the evidence available, analysing and evaluating some information clearly, and with some accuracy. They make judgements and draw appropriate conclusions.</p>
F	<p>Candidates recall, select and communicate knowledge and understanding of basic aspects of design and technology, including its wider effects.</p> <p>They apply limited knowledge, understanding and skills to plan and carry out simple investigations and tasks, with an awareness of the need for safety and precision. They modify their approach in the light of progress.</p> <p>They review their evidence and draw basic conclusions.</p>

B Spiritual, Moral, Ethical, Social, Legislative, Sustainable Development, Economic and Cultural Issues, and Health and Safety Considerations

AQA has taken great care to ensure that any wider issues relevant to the education of students at Key Stage 4 have been identified and taken into account of in the preparation of this specification. They will only form part of the assessment requirements where they relate directly to the specific content of the specification and have been identified in Section 3: Content.

European Dimension

AQA has taken account of the 1988 Resolution of the Council of the European Community in preparing this specification and associated specimen units.

Environmental Education

AQA has taken account of the 1988 Resolution of the Council of the European Community and the Report “Environmental Responsibility: An Agenda for Further and Higher Education” 1993 in preparing this specification and associated specimen units.

Avoidance of Bias

AQA has taken great care in the preparation of this specification and specimen units to avoid bias of any kind.

C Overlaps with other Qualifications

Some overlaps exist between this and other Design and Technology specifications. The overlap is primarily in the design process and the scheme of assessment. As all specifications conform to the GCSE Design and Technology Subject Criteria, there are also overlaps of broad content.

D Key Skills – Teaching, Developing and Providing Opportunities for Generating Evidence

Introduction

The Key Skills Qualification requires candidates to demonstrate levels of achievement in the Key Skills of Communication, Application of Number and Information and Communication Technology.

The Wider Key Skills of Improving own Learning and Performance, Working with Others and Problem Solving are also available. The acquisition and demonstration of ability in these 'wider' Key Skills is deemed highly desirable for all candidates.

The units for each Key Skill comprise three sections:

- What you need to know
- What you must do
- Guidance.

Candidates following a course of study based on this specification for Design and Technology: Textiles Technology can be offered opportunities to develop and generate evidence of attainment in aspects of the Key Skills of:

- Communication
- Application of Number
- Information and Communication Technology
- Working with Others
- Improving own Learning and Performance
- Problem Solving.

Areas of study and learning that can be used to encourage the acquisition and use of Key Skills, and to provide opportunities to generate evidence for Part B of units, are provided in the Teachers' Resource Bank for this specification.

The above information is given in the context of the knowledge that Key Skills at levels 1 and 2 will be available until 2010 with last certification in 2012.

Key Skills Qualifications of Communication, Application of Number and Information and Communication Technology will be phased out and replaced by Functional Skills qualifications in English, Mathematics and ICT from September 2010 onwards. For further information see the AQA website: <http://web.aqa.org.uk/qual/keyskills/com04.php>.

GCSE D&T Textiles Technology Teaching from 2009 onwards

Qualification Accreditation Number: 500/4588/X

Every specification is assigned a national classification code indicating the subject area to which it belongs. The classification code for this specification is 9050.

Centres should be aware that candidates who enter for more than one GCSE qualification with the same classification code will have only one grade (the highest) counted for the purpose of the School and College Performance Tables.

Centres may wish to advise candidates that, if they take two specifications with the same classification code, schools and colleges are very likely to take the view that they have achieved only one of the two GCSEs. The same view may be taken if candidates take two GCSE specifications that have different classification codes but have significant overlap of content. Candidates who have any doubts about their subject combinations should check with the institution to which they wish to progress before embarking on their programmes.

To obtain free specification updates and support material or to ask us a question register with Ask AQA:

www.aqa.org.uk/ask-aqa/register

Support meetings are available throughout the life of the specification.
